HEKLA – Helsingborg & Klaipėda LNG Infrastructure Facility Deployment

LNG in Maritime, Transport and Energy Sectors Seminar

Helsingborg Hamn / Port of Helsingborg, Sweden

Join us the 23rd of May 2018 for a seminar summarizing the achievements of the project HEKLA Helsingborg & Klaipėda LNG Infrastructure Facility Deployment – an initiative leading to the development of an LNG bunkering network in the seaports of the Baltic Sea region.

Following previous projects - LNG in Baltic Sea Ports I & II which prepared the ground for investments, HEKLA project made it possible for the participating ports to be among the first within the Baltic Sea region which are to construct infrastructure dedicated to LNG bunkering. Furthermore, the actions planned in Helsingborg and Klaipėda will make LNG fuel available in the western and eastern part of the Baltic Sea. The project not only makes it possible to deploy an LNG bunkering network, but also encourages ship-owners into developing more propulsion vessels.

The aim of the LNG in Maritime, Transport and Energy Sectors Seminar is not only to present the HEKLA project accomplishments but also to highlight the importance of simultaneous development of LNG infrastructure among the Energy, Transport, Maritime and Industry sectors.

HEKLA Helsingborg & Klaipėda LNG Infrastructure Facility Deployment is co-financed by the European Union within the Connecting Europe Facility instrument.
